

Scams Didn't Go Away When the Ball Dropped

A review of scams past, present, and future

THIS MONTH'S TOPICS:

Scammings Past:

The Scam-World of the past

Scammings Present:

No gift like the present

Scammings Future:

Scam of the future

Cyber Zen:

Reflection Section

January is more than just another month. It marks the beginning of a new year. A 31-day reminder to reflect on the old and start the new.

The cybersecurity world is no stranger to January. It is a time when many fraudulent cyber criminals ramp up their activities, and new tricks get formulated.

In this month's issue, we're going to review the past, present, and future of scamming. Helping you take the time this month to reflect, re-learn, and grow into 2022 as the vigilant, cyber-aware, non-link-clickers that we all aspire to be.

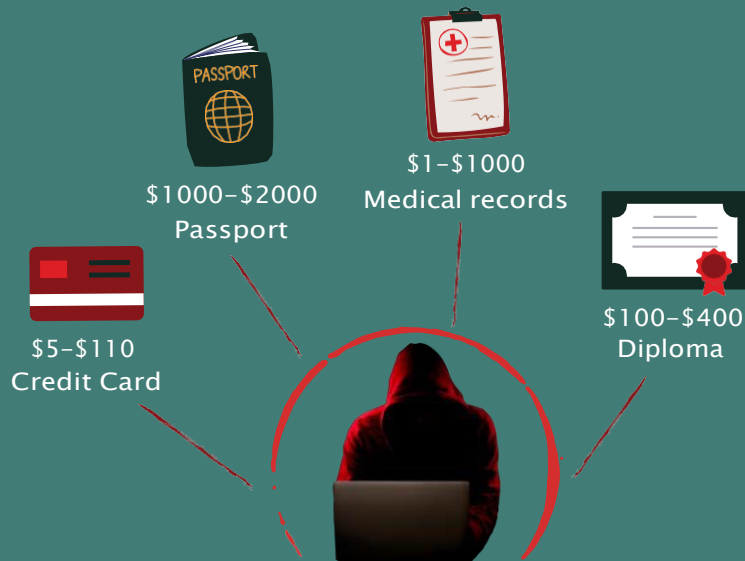

SCAMMINGS PAST

REFLECT

Cybercriminals grow more sophisticated with each year. By reflecting on the Scam-World of the past, you can better prepare yourself for the future.

CYBERCRIME- A TIMELINE

WHAT PII HAS BEEN WORTH ON THE DARK WEB

2017

2018

2019

2020

\$328 MILLION LOST TO IMPOSTER SCAMS

Of the reported imposter scams this year, 1 in 5 people lost a median range of \$500

ACCOUNT TAKEOVER GROWS

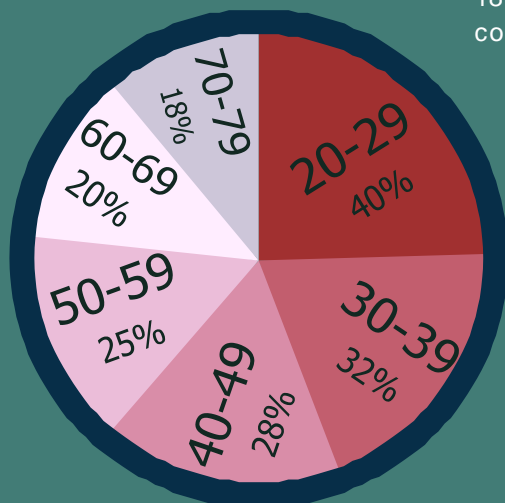

Reaching a four-year high, ATO tripled in 2018, resulting in over 5.1 billion in losses

RELATIVES COMMIT FRAUD AGAINST MINORS

A 2019 identity fraud report analyzing 1 million cases against minors, found that 18 % of those crimes were committed by the child's relative

CYBERCRIMINALS TAKE ADVANTAGE OF PANDEMIC

This year saw a 35% increase in attempted fraudulent transactions

PERCENTAGE OF FRAUD LOSS REPORTED BY AGE

WHAT INFORMATION RESONATES WITH YOU THAT YOU CAN TAKE INTO THE NEW YEAR?

SCAMMINGS PRESENT

It's hard to live in the present when worrying about the future.

But knowledge is power!

Take advantage of any additional trainings at your disposal. Find topics you have concerns about or an interest in and learn some tactics to help you stay vigilant.

SCAM OF THE FUTURE

Steve is an up-and-coming scammer with a new scheme under his belt: he utilizes a real address (7 Smith Street) and a fake name (Steve Scammerling) to open up real accounts and carry out transactions.

Lauren really lives on 7 Smith Street. She started receiving mail for Steve Scammerling, but thought nothing of it, and threw the junk mail in the trash. Years later, she reviewed her credit report for the first time in a while and noticed some activity that was not hers.

Synthetic Identity Fraud is the creation of a fictional persona, through the blending of stolen personal information with made-up details that fill in the gaps in order to open accounts and carry out transactions.

It's a relatively new process, and a fast-growing financial crime method to be on the lookout for.

Did you spot the red flags?

- ▶ Lauren suddenly started receiving mail to her address with someone else's name. This should have been a sign that her information was being mingled with other made-up details to commit fraud.
- ▶ Lauren was not regularly checking her credit report. Had she been, she might have caught the suspicious activity much sooner.

In a Synthetic Identity Fraud case, though some of the information is made up, the parts that are real could be tied back to you and can have a negative impact.

Technically, there is no "victim" of Synthetic Identity Fraud, as the "person" exploited does not exist. Because of this, such crimes can go undetected for months.

Though Synthetic Identity Fraud can be difficult to detect and prevent, your best defenses are to use strong passwords, remain vigilant against phishing attempts, and regularly inspect personal accounts for suspicious activity.

Key Takeaways

The **past** holds a lot of cyber information that we can learn from to help us forge through the cyber-**present** with the courage needed to take on the **future**.

By reflecting on the past, learning as much as you can in the present, and staying on top of future trends, cybercriminals don't hold a snowflake to your cybersecurity awareness.

Review past cybercrimes. By learning where others went wrong, you can avoid making the same mistakes, catching on to cyber-patterns before they catch onto you.

Anxiety Society. If you fear your personal information being compromised, you're not alone. But don't let your worries consume you. Name them, learn more about them, and conquer them.

Reflection Section

Reflection allows for stillness amidst chaos, providing the space for the mind to interpret external stimuli and create deeper meaning.

How does this relate to cybersecurity?

It's a big cyber-world out there, with a lot of information. Some of it may not feel like it relates to you at first glance. But taking the time to look further, create connections, and observe will allow you to develop a strong cybersecurity mindset, which can then inform future actions.

Practice reflection.

Take the time to reflect on this newsletter. Consider the tips from different angles to find key takeaways that create meaning within your own world.
